

Shopify Task – New Store Setup & App Understanding

Objective

Reference: mothersfoods.in , halwahaweli.com

Create any new Shopify store.

The main purpose of this task is to understand:

- How to create and set up a Shopify store
- How to customize the Shopify theme
- How each app works
- Where each app can be used
- How to configure and use the apps in the store
- How different apps work together

The developer should **study each app first and then implement it in the store.**

1. Shopify Store Setup

Create a new Shopify store with a suitable product category.

The store should have:

- Homepage
- Header
- Navigation menu
- Footer
- Collection pages
- Product pages
- Cart page
- Search
- Product variants
- Product images
- Product descriptions
- About page
- Contact page
- Basic Shopify settings

The store should be responsive on:

- Desktop

- Tablet
- Mobile

Use a Shopify theme such as **Dawn** and customize the theme according to the store requirement.

2. Apps to Study and Use

1. Razorpay COD & Magic Checkout

What it does:

Used for online payment, COD and improving the Shopify checkout experience.

Task:

- Study how Razorpay works with Shopify.
- Understand COD functionality.
- Understand Magic Checkout.
- Configure the app where possible.
- Test the checkout flow.

Reference:

[Razorpay Shopify App](#)

2. Whatomation

What it does:

Used for automation and customer/order-related WhatsApp communication.

Task:

- Study the available automation features.
- Understand WhatsApp/customer communication.
- Identify where automation can be useful.
- Configure one suitable automation flow.
- Test the flow.

Reference:

[Whatomation – Shopify App](#)

3. Wi ATC

What it does:

Used to improve the Add to Cart experience, including sticky Add to Cart functionality.

Task:

- Study the Add to Cart features.
- Configure the required Add to Cart option.
- Check product variants.
- Check quantity selection.
- Test Add to Cart on mobile and desktop.

Reference:

[Wi ATC](#) – Shopify App

4. Aris Bundles

What it does:

Used to create product bundles, combo offers and bundle pricing.

Task:

- Study how bundles are created.
- Create at least one product combo.
- Add bundle pricing.
- Check how the bundle is added to cart.
- Test the bundle on mobile and desktop.

Reference:

[Aris Bundles](#) – Shopify App

5. Search & Discovery

What it does:

Shopify's app for product search, filters, recommendations and helping customers find products easily.

Task:

- Configure search.
- Configure search suggestions.
- Add collection filters.

- Configure product recommendations.
- Test product search and filtering.

Reference:

[Shopify Search & Discovery](#)

6. Shiprocket: eCommerce Shipping

What it does:

Used for shipping management, courier services, order shipping and tracking.

Task:

- Study Shiprocket integration.
- Understand order synchronization.
- Understand shipping methods.
- Configure shipping where possible.
- Check order and tracking flow.

Reference:

[Shiprocket](#) – Shopify App

7. Judge.me Reviews

What it does:

Used to collect and display customer reviews, ratings and testimonials.

Task:

- Install and configure Judge.me.
- Add test reviews.
- Display star ratings.
- Display review count.
- Add reviews to the product page.
- Check the review submission flow.

Reference:

[Judge.me Reviews](#) – Shopify App

8. Whatmore Shoppable Videos

What it does:

Used to show shoppable videos/reels where customers can watch a video and directly view or shop the related product.

Task:

- Study how shoppable videos work.
- Add product videos/reels.
- Connect videos with products.
- Add the video section to the website.
- Check mobile and desktop display.
- Test the product shopping flow from the video.

Reference:

WATCH AND BUY

9. Messaging

What it does:

Used for customer communication and sending relevant messages to customers.

Task:

- Study the messaging features.
- Understand customer communication options.
- Configure a suitable messaging use case.
- Test the customer communication flow.

Reference:

[Shopify Messaging](#) – Official

10. PH MultiCarrier Shipping Label

What it does:

Used to manage multiple shipping carriers, shipping labels and delivery-related processes.

Task:

- Study how the app works.
- Understand carrier configuration.
- Understand shipping label creation.
- Configure suitable shipping options.
- Check how it works with Shopify orders.

Reference:

[PH MultiCarrier Shipping Label](#) – Shopify App

11. Bundles

What it does:

Used to create Shopify product bundles by combining multiple products into one offer.

Task:

- Study Shopify Bundles.
- Create one bundle product.
- Add multiple products to the bundle.
- Check bundle pricing.
- Check inventory behavior.
- Add the bundle to cart and test the flow.

Reference:

[Shopify Bundles](#) – Official

12. Frequently Bought Together

What it does:

Used to recommend products that customers commonly buy together and increase cross-selling.

Task:

- Study how Frequently Bought Together works.
- Select related products.
- Add the recommendation section to the product page.
- Allow customers to select multiple products.
- Test adding the recommended products to cart.

3. Product Page

Create a proper product page and use the apps wherever required.

The product page should include:

- Product images
- Product title
- Price
- Compare-at price
- Discount
- Product variants
- Quantity
- Add to Cart
- Buy Now
- Sticky Add to Cart
- Reviews
- Bundle / Combo
- Frequently Bought Together
- Product recommendations

- Shoppable videos
- Delivery information
- COD information
- Product description
- Product benefits/specifications

4. Bundle / Combo

Use **Aris Bundles** and **Bundles** and understand how both work.

Create suitable combinations such as:

Example:

Product A + Product B + Product C

or

Complete Kit

Product A + Product B

The developer should check:

- Bundle creation
 - Bundle pricing
 - Discount
 - Inventory
 - Add to Cart
 - Checkout
-

5. Frequently Bought Together

Add a Frequently Bought Together section to the product page.

Example:

Frequently Bought Together

- Main Product
- Product B
- Product C

Customer should be able to select the products and add them to the cart.

6. Search & Discovery

Configure Shopify Search & Discovery.

Check:

- Search
- Search suggestions
- Filters
- Collection filtering
- Product recommendations
- Related products

7. Reviews

Use Judge.me Reviews on the product page.

Check:

- Star rating
 - Review count
 - Customer reviews
 - Review submission
 - Review display
-

8. Shoppable Videos

Use Whatmore Shoppable Videos.

Add videos/reels related to products.

Customer should be able to:

Watch Video → View Product → Shop Product

9. Add to Cart

Use Wi ATC and check the complete Add to Cart experience.

Test:

- Add product
 - Select variant
 - Change quantity
 - Add multiple products
 - Mobile Add to Cart
 - Desktop Add to Cart
 - Cart update
-

10. Payment & Checkout

Study Razorpay COD & Magic Checkout.

Understand:

- Online payment
- COD
- Magic Checkout
- Checkout process

Test the complete checkout flow where the development store allows it.

11. Shipping

Study both:

- Shiprocket
- PH MultiCarrier Shipping Label

Understand:

- How each app works
- Shipping configuration
- Carrier options
- Shipping rates
- Order processing
- Tracking
- Shipping labels

Also check whether both apps are required together or whether there is any overlapping functionality.

12. Messaging & Automation

Study:

- Whatautomation
- Messaging

Understand how they can be used for:

- Customer communication
- Order communication
- WhatsApp communication

- Automation

Implement at least one suitable use case.

13. Complete Customer Flow

The developer should test the complete customer journey:

Homepage

↓

Collection

↓

Product

↓

Reviews

↓

Bundle / Combo

↓

Frequently Bought Together

↓

Shoppable Video

↓

Add to Cart

↓

↓

Order

↓

Customer Communication / Tracking

14. Final Requirement

The developer should not simply install all the apps.

The developer needs to understand each app properly and explain:

- What is the purpose of the app?
 - What are the main features?
 - Why do we need this app?
 - Where can we use it?
 - How do we configure it?
 - How does it work with Shopify?
 - How does it work with the other apps?
 - What limitations or conflicts are there?
-

15. Final Submission

The developer should provide:

- Working Shopify store
- Store preview link
- Products and collections
- Apps installed/configured
- App configuration details
- Screenshots of important app functionality
- Testing details
- Issues or limitations found
- Short explanation of each app
- Complete customer flow demonstration

Important

The main purpose of this task is to understand Shopify store setup and the listed apps. The developer should study, configure, use and test the apps instead of only installing them.
